

PRODUCT DOCUMENTATION

Motee HR Solutions

A module-by-module reference to every feature
across the HR Admin portal and the Employee
Self-Service Portal.

CONTENTS

What's inside

Nine modules covering company setup, hiring, day-to-day HR operations, internal culture tools, system administration, and the employee-facing self-service portal.

1	Sign-Up, Login & First Setup	3
	Sign In / Sign Up · Company Setup Wizard · New-Hire Pre-boarding (Join Portal) · Document Signing (Docu-Sign)	
2	Organization	5
	Company Profile · Departments · Branches · Employees (Employee Directory & Records) · Roles · Org Structure · Headcount · Employment Types · Employee Checklist · Benefit Plans · EOR (Employer of Record)	
3	Talent	8
	Workforce Requests · Requisition · Recruitment · Onboarding · Offboarding · Performance · Training (Learning & Development)	
4	HR Action Center	10
	Tasks (My Tasks) · Submissions · Events (Calendar) · Workflows	
5	Time & Payroll	12
	Attendance · Leave Management · Shifts · Expenses · Occupational Health	
6	Operations	14
	Workforce (Operations) · Assets · Contracts · Documents · Reports · Analytics	
7	Workspace	15
	Announcements · Community · Helpdesk · Knowledge Base · Kudos & Recognition · Projects · Suggestions · Surveys	
8	Admin & Settings	18
	Users · Access Levels & Permissions · Audit Trail · Grievance & Disciplinary · Settings	
9	Employee Self-Service Portal	19
	Dashboard · My Tasks · My Approvals · My Submissions · Company Events · Expenses (My Expenses) · Documents (My Documents) · Time Off: Request, Balance, Attendance & Shifts · My Profile · My Contracts · My Assets · Diversity · Growth: Performance & Training · Company: Announcements, Community, Helpdesk, Knowledge Base & Org Chart	

About this document

This guide documents every module of Motee HR Solutions as it exists in the product today: what each screen does, where to find it, and the capabilities built into it. It covers the two portals a customer actually uses — the **HR Admin portal**, used by HR teams to run the business, and the **Employee Self-Service Portal**, used by every staff member for their own record — along with the entry flows that connect them, such as sign-up, company setup, and new-hire pre-boarding.

Where a feature has a notable rule, limitation, or behaviour worth flagging, it's called out in a **Good to know** note alongside that feature.

● HR Admin Portal

Sections 2–8 — Organization, Talent, HR Action Center, Time & Payroll, Operations, Workspace, and Admin & Settings.

● Employee Portal

Section 9 — the self-service experience every staff member sees, scoped to their own record.

● Entry Flows

Section 1 — sign-up, login, company setup, pre-boarding, and document signing.

GETTING IN

1 Sign-Up, Login & First Setup

Every path into Motee HR Solutions starts here: the sign-in and account-creation screens, the guided wizard a brand-new company works through to configure itself, the self-service link a new hire uses to submit their own paperwork before day one, and the built-in tool used to sign documents like offer letters and contracts.

1.1 Sign In / Sign Up

The front door to the platform — authenticates a person and routes them straight to the correct portal for their role.

WHERE TO FIND IT App root / landing URL

- Login form with a country switcher (United Kingdom / Nigeria) that swaps the active demo dataset and country-specific rules, plus a light / dark theme toggle
- Inline validation, a loading state, and automatic post-login routing — Employees and Line Managers land in the Employee Self-Service Portal, everyone else lands in HR Admin
- Forgot-password recovery: email → 6-digit code → new password, with a Back-to-Login exit at every step
- Registration: name, work email, company name and password → 6-digit email verification → straight into the Company Setup Wizard
- A floating “Demo Links” shortcut jumps directly between Login, Register, Verify-OTP, Forgot-Password, Onboarding and Dashboard screens

1.2 Company Setup Wizard

Walks a brand-new HR admin through configuring their company before they ever see the live dashboard.

WHERE TO FIND IT /onboarding — reached automatically after email verification

- Three setup paths: Manual Entry (7-step guided flow), Bulk Upload (spreadsheet-based), and Test With Demo Data (disabled, “coming soon”)
- Manual path: Company Profile → Organisational Structure (naming conventions plus a diagrammed Hierarchical / Flat / Matrix choice) → Role & Permission Model (RBAC, Permission-Based, or Hybrid) → HR Module Preferences (toggle grid, at least one required) → Workflow Configuration (leave-approval routing with a live preview chain) → Table & Dashboard Labels → Review & Submit, with per-step Edit links
- Bulk Upload path: download a CSV template, fill it in, then either pre-fill the entire 7-step flow for review or skip straight to a blank manual entry

GOOD TO KNOW Completing setup drops the admin straight into the live dashboard with only the selected modules enabled.

1.3 New-Hire Pre-boarding (Join Portal)

A separate, login-free page a new hire completes before their start date, replacing email-based paperwork chasing.

WHERE TO FIND IT A unique /join/<record-id> link per joiner, generated the moment onboarding starts

- Reached either from Recruitment’s Hired stage (“Send to onboarding”) or directly from the Onboarding module (Manual Entry, Invite, or Bulk Import)
- Full intake flow: privacy-notice gate → personal & contact details → bank & identity (country-specific fields for UK vs. Nigeria) → required document uploads (passport, right-to-work, proof of address, plus guarantor IDs for Nigeria) → guarantors (Nigeria only) → emergency contact and optional medical info → UK Starter Checklist (P45 / HMRC questionnaire) → review and a signed declaration
- “Save & finish later” parks progress against the same link, so returning to it resumes on the exact step left off on
- A confirmation screen closes the loop with a “What happens next?” checklist

1.4 Document Signing (Docu-Sign)

A lightweight, built-in e-signature tool for PDF, PNG or JPG files — offer letters, contracts, or any upload — without leaving the platform.

WHERE TO FIND IT “Docu-Sign” in the sidebar, or contextually via a Sign action on a specific file

- Upload a document (up to 15MB) or open one already loaded from a contract or employee record
- Draw a signature with a choice of ink colour, or drop editable text boxes anywhere on the page — both are draggable and deletable
- Zoom (10%–200%) and page-navigation controls over the document viewer
- Finish by downloading the signed file, or saving it straight into the Documents & Compliance library

2 Organization

Where HR sets up and maintains the company's structural backbone — who works there, what departments and offices exist, what job titles and contract types are available, and how everyone reports to everyone else. Most other modules pull their department, branch and employee lists straight from what's set up here.

2.1 Company Profile

The company's own "About" page — legal details, verification documents, a company-wide pinned announcement, and a live org chart.

WHERE TO FIND IT Organization → Company Profile

- Profile tab: editable company details (name, logo, industry, size, country, contact info), plus Locations, Verification Summary and Company Summary cards
- Verification Documents tab: submit registration and tax documents with status tracking (Draft / Submitted / Under Review / Verified / Rejected) and a full history log
- Pinned Announcement tab: publish a banner message that appears on every employee's dashboard
- Organogram tab: a live, read-only org chart drawn from department and reporting-line data, with zoom, fit-to-screen and export

2.2 Departments

The catalogue of departments across the company — headcounts, budgets, heads, and open positions.

WHERE TO FIND IT Organization → Departments

- One-click filter cards for Total Departments, Total Employees, Open Positions and No Department Head
- Add a department individually or via bulk CSV upload; assign existing employees to a department from a searchable picker
- Each department has its own dedicated page with Overview, Members, Budget (spend, summary, year-to-date utilisation) and Activity tabs

2.3 Branches

Every physical site the company operates from — a separate axis from departments, since each employee is posted to exactly one branch.

WHERE TO FIND IT Organization → Branches

- Add branches with location, type (Head Office / Branch / Regional Office / Site / Remote), head, and a headcount target
- “Scope app to this branch” temporarily narrows the whole app’s view to one site
- Each branch has its own page: site details, a branch head linked to their profile, departments on site, and everyone posted there

GOOD TO KNOW Deleting a branch with people still posted to it is blocked, with a shortcut to reassign them first.

2.4 Employees (Employee Directory & Records)

The core employee directory and the single record-keeping file for every person in the company.

WHERE TO FIND IT Organization → Employees

- Lifecycle tabs — Active, On Leave, On Probation, Offboarding Notice, Pending, Onboarded, Inactive, Deleted, All — each with a live count
- Full record-level actions: edit, resend credentials, view activity log, send kudos, deactivate/reactivate (suspends access without ending employment), start offboarding, and soft delete/restore
- Each employee has a dedicated profile page — Details / Contact / Address / Bank / Change-Request-Log tabs, plus a two-pane menu covering Job, Compensation, Benefits, Payslips, Attendance, Leave, Performance, Learning, Assets, Compliance and HR-only sections

GOOD TO KNOW “Onboard Employee” routes to the Talent → Onboarding wizard rather than opening a form here, since new hires are created there.

2.5 Roles

A catalogue of job positions and titles across the company and their vacancy status.

WHERE TO FIND IT Organization → Roles

- Add and manage positions with title, department, grade, description and status (Active / Vacant / Inactive / Filled)
- A dedicated Vacancy Report tab lists only currently-vacant positions with a “Raise Requisition” shortcut per row

GOOD TO KNOW Despite the name, this is not a permissions or user-roles screen — that lives in Admin & Settings (8.2).

2.6 Org Structure

The editable reporting-line map for the whole company — where “who reports to whom” is actually changed.

WHERE TO FIND IT Organization → Structure

- Tree view draws the visual org chart, filterable by department
- Table view lists every employee with their manager, level number, and direct-report count
- “Change Manager” reassigns any employee’s reporting line from a simple dialog

GOOD TO KNOW Separate from the read-only Organogram tab inside Company Profile, which only displays this same data.

2.7 Headcount

A planning and analytics workspace — hiring targets per department, gaps against them, and future scenarios.

WHERE TO FIND IT Organization → Headcount

- Headcount Plan: target vs. actual per department with a fill-rate progress bar and set-target action
- Gap Report, Attrition Risk, Demographics and Trends tabs for deeper analysis
- Scenarios: a “what-if” sandbox to model headcount and cost impact without touching the live plan

2.8 Employment Types

The catalogue of contract types (Full Time, Part Time, Fixed Term, etc.) and the pay, leave and statutory rules attached to each.

WHERE TO FIND IT Organization → Employment Types

- Define pay frequency, contract duration, leave entitlement, payroll inclusion, statutory deductions, pension percentages, probation rules and working hours per type
- Individual or bulk-CSV creation; activate or deactivate existing types

2.9 Employee Checklist

The standard onboarding task template, plus a live view of each current new hire’s progress against it.

WHERE TO FIND IT Organization → Employee Checklist

- Onboarding Template tab: reorder, edit or add tasks, each assigned a responsible party (HR / Manager / IT / Employee / Finance) and a due point
- New Hire Status tab: a progress bar and overall status (Pending / In Progress / Completed / Overdue) for everyone currently onboarding

2.10 Benefit Plans

Where HR defines benefit plans, company-wide or restricted to specific contract types.

WHERE TO FIND IT Organization → Benefit Plans

- Plans grouped by category, each showing provider, contribution split, coverage, and eligible headcount
- Create, duplicate, archive or delete plans (built-in system plans can't be deleted)
- Eligibility can be scoped to all employees or to specific employment types

2.11 EOR (Employer of Record)

Manages workers employed internationally through a third-party Employer of Record partner who becomes their legal local employer.

WHERE TO FIND IT Organization → EOR

- Workers tab: country, role, provider and status per worker, with a detail view covering a cost breakdown (gross salary, employer statutory cost, provider management fee, USD-equivalent) and a compliance checklist
- Providers, Compliance and Billing tabs track the partner companies, cross-worker compliance, and monthly invoices

GOOD TO KNOW EOR worker detail views don't have their own shareable URL — they must be reached by opening the Workers tab each time.

HR ADMIN

3 Talent

Where a headcount need becomes an actual hire and then a managed employee lifecycle: request headcount → get it approved → turn it into a formal requisition → post the job and run candidates through a pipeline → onboard the person hired → and, eventually, offboard them — plus two adjacent modules for ongoing performance reviews and course/training tracking.

3.1 Workforce Requests

The starting point of the hiring chain — HR raises a request for extra headcount, routed through an HR → Finance → Executive approval chain.

WHERE TO FIND IT Employee Management → Workforce Requests

- Request, Approved, and Approval Chain tabs, with summary cards doubling as one-click filters
- New-request form: department, cost centre, position, grade, reason, vacancy type, headcount, urgency, budget and expected start date
- Approved requests jump straight into the Requisition module with the source pre-selected

3.2 Requisition

The middle tier between a raw headcount ask and an actual job posting — attaches real role detail and sends it through its own Manager → HR → Finance approval chain.

WHERE TO FIND IT Employee Management → Requisition

- 3-step wizard: select an approved workforce request → fill in title, location, positions, reporting/hiring manager, recruiter, salary band, budget and job description → review and submit
- Approved requisitions jump straight into building a Recruitment with role details carried over read-only

3.3 Recruitment

The largest Talent module — publishes the vacancy, builds the application form and job advert, and runs every applicant through a hiring pipeline from application to hire.

WHERE TO FIND IT Employee Management → Recruitment

- 6-step builder: requisition selection, role details, application form (custom fields plus saved filters), job advert (pay, location, requirements, board settings), publish settings (schedule, platforms, interview rounds), and review
- Fixed pipeline — Applicant → Scheduled for Interview → Interviewed → Offer → Hired — with Table and drag-and-drop Board views; rejected candidates stay inside their stage as a toggle rather than a separate tab
- Stage-specific actions: schedule interviews, score candidates (1–5 stars plus a hire recommendation), send offers, record acceptance or decline, and send onboarding invites
- Each candidate has an 8-tab detail drawer: Profile, Application, Interviews, Score, Comms, Offers, Files, References

GOOD TO KNOW Every vacancy runs the same fixed pipeline — there is no separate per-stage gate or criteria builder.

3.4 Onboarding

Runs a new hire from invite (or manual entry) through a checklist of tasks and reviewer approvals until they're added to the employee directory.

WHERE TO FIND IT Employee Management → Onboarding

- Three ways to initiate: Manual Entry (dedicated multi-step page), Send Invite (emails a self-service link), or Bulk Upload
- Pipeline table tracks Stage (Pre-Boarding through 90-Day / Completed), Method, task progress and invitation status
- A dedicated detail page per hire shows their submitted intake info alongside a workflow task list; approving the final required task auto-completes onboarding and creates the employee record

3.5 Offboarding

Manages an employee exit end to end — approval, a clearance checklist, and the exit interview.

WHERE TO FIND IT Employee Management → Offboarding

- Pending / Approved / Disapproved / Reactivated / All tabs; initiate by picking an existing active employee, a last working date, and an exit reason
- Clearance Checklist and Exit Interview tracked per record; completing both automatically sets the employee inactive
- Additional actions: revoke system access, generate exit documents, schedule the exit interview, and reactivate a leaver

3.6 Performance

Tracks formal performance reviews and individual employee goals.

WHERE TO FIND IT Employee Services → Performance

- Reviews tab: create reviews (type, period, reviewer, due date) and complete assessments with a 1–5 star rating, strengths, improvement areas and comments
- Goals tab: create and track goals by category, with progress and status (On Track / At Risk / Completed / Cancelled / Overdue)

GOOD TO KNOW This module's data is session-only and resets on page refresh.

3.7 Training (Learning & Development)

Runs the training course catalog, assigns employees to courses, and reports pass/fail results.

WHERE TO FIND IT Employee Services → Learning & Development

- Courses tab: create and edit courses with an inline quiz builder, or manage a course's quiz separately
- Enrollments tab: enroll one or many employees into a course with a due date
- Results tab: pass/fail rates, quiz attempts and average progress per course

GOOD TO KNOW Like Performance, this module's data resets on refresh and has no cross-links elsewhere in Talent.

HR ADMIN

4 HR Action Center

The HR team's day-to-day command centre — a personal task list, the shared team calendar, every request waiting on a decision, and the task-checklists that drive processes like onboarding and offboarding.

4.1 Tasks (My Tasks)

A personal to-do list for whoever is logged in, separate from anything a Workflow generates.

WHERE TO FIND IT Workspace → My Tasks

- Filter by All / Active / Done and by priority; drag-and-drop reordering
- Add a task with description, notes, priority and due date from a side panel; view full detail or delete from the list

4.2 Submissions

The shared inbox for every formal request that travels through an approval chain — leave, workforce/headcount requests, requisitions, contracts, onboarding, offboarding clearance, promotions, training, assets and expenses.

WHERE TO FIND IT Overview → Submissions & Approvals

- Pending My Approval / Submitted by Me / In Progress / Approved this week / All submissions tabs, each with a live count
- New Submission form adapts its extra fields to the chosen document type, and supports attachments and an on-screen signature where required
- Detail page: a plain-language status banner, a horizontal approval-chain strip, decision actions (Approve, Return to sender, Reject, or Withdraw), and a full activity log

GOOD TO KNOW Submissions is the shared inbox where decisions get made — the actual chain configuration (steps, reviewers, requirements) lives inside each document type's own originating module.

4.3 Events (Calendar)

The shared HR calendar for meetings, deadlines, holidays, leave, training due-dates, birthdays and work anniversaries.

WHERE TO FIND IT Workspace → Calendar

- Month view with colour-coded event types, plus an All Events list and a week-view Calendar Breakdown
- Manually create events with a title, type, all-day or timed slot, and description

GOOD TO KNOW Several event types are generated automatically from other modules (leave requests, cover arrangements, training deadlines, birthdays, anniversaries) and update themselves as the source data changes.

4.4 Workflows

A standalone builder for ordered task checklists that carry an HR process end to end (onboarding, offboarding, recruitment, and so on) — distinct from the approval chains behind Submissions.

WHERE TO FIND IT Workspace → Workflows

- Four built-in, read-only workflows ship out of the box: Standard Recruitment, Standard Preboarding, Standard Onboarding (11 steps), and Standard Offboarding
- Each task names an assignee (role-based or individual), an optional reviewer, timing/dependency rules, and conditions (e.g. remote workers only)
- Running a workflow previews which tasks start now, which are blocked on dependencies, and which are skipped, then notifies everyone assigned

GOOD TO KNOW Running a workflow only sends notifications — it doesn't create entries in My Tasks or Submissions, and nothing in the app currently triggers a workflow automatically even when set to "Automatic."

HR ADMIN

5 Time & Payroll

Tracks the day-to-day mechanics of employment — who showed up, who's off, who's working which shift, what people are owed for expenses, and any employee health cases that need accommodation.

5.1 Attendance

Tracks daily clock-ins, weekly timesheets, work schedules, and an optional presence-check feature.

WHERE TO FIND IT Time & Payroll → Attendance

- Today / Timesheets / Schedules / Presence Checks tabs, with summary tiles for Present, Absent, Late and Pending Approvals
- Log or correct an attendance entry directly; approve or reject submitted timesheets individually or via quick approve
- Presence Checks: configurable "are you still working?" prompts with a live response table

5.2 Leave Management

Runs the full leave lifecycle — submission, multi-stage approval, balances, and policies — plus a team calendar.

WHERE TO FIND IT Time & Payroll → Leave

- Requests tab: submit on an employee's behalf, review with a step-by-step approval stepper, and approve or reject individually or in bulk
- Calendar, Balances (entitlement, carry-over, used, pending, remaining, with manual adjustment), Policies, and Approval Chain tabs
- A dedicated Leave Timeline page shows everyone's absences across a month at a glance, with a panel for reviewing a specific request or overlapping cover

5.3 Shifts

Builds shift templates and assigns them to employees on a weekly roster grid.

WHERE TO FIND IT Time & Payroll → Shifts

- Roster tab: a week-by-week grid — click any cell to assign or clear a shift template for that employee/day
- Shift Templates tab: define reusable templates (hours, break length, applicable days) with a live daily-hours preview

5.4 Expenses

The HR review queue for employee expense claims.

WHERE TO FIND IT Time & Payroll → Expenses

- Pending My Approval, All claims, and Approval chain tabs
- Each claim opens its own dedicated page with a status banner, full details and receipts, and a decision panel (Approve, Return for correction, Reject), with a signature pad when the chain requires one

5.5 Occupational Health

A confidential, read-only monitoring dashboard for formal Occupational Health referrals — fitness-for-work status and workplace adjustments only, never diagnoses.

WHERE TO FIND IT Time & Payroll → Occupational Health

- Referrals are generated automatically once continuous absence crosses a set threshold — nothing is manually created here
- Each case card expands into a step-by-step case-workflow tracker, fitness status, recommended adjustments, and case notes

6 Operations

Covers the parts of HR that sit around the edges of day-to-day people management: workforce planning and reporting, physical company assets, signed contracts, the document library, and the export/analytics tooling that turns everything else into numbers and charts.

6.1 Workforce (Operations)

A read-only workforce-planning dashboard — headcount targets, turnover, hiring speed, skills gaps, and demographics.

WHERE TO FIND IT Operations → Workforce

- Headcount Plan, Turnover Analytics, Hiring Velocity, Skills Gap and Demographics tabs, each with department-level detail pop-ups and CSV/Excel export

GOOD TO KNOW Nothing is created, edited or approved here — it reuses the same Headcount Planning data shown elsewhere in the app.

6.2 Assets

Tracks company equipment from purchase through assignment, return, maintenance, and eventual retirement.

WHERE TO FIND IT Operations → Assets

- All Assets, Unassigned Assets, Pending Returns, and Approval Chain tabs
- Register individually or via bulk CSV; assign, record returns, send to maintenance, or decommission (permanent) from a per-row menu
- Every asset keeps a full history log of every action taken against it

6.3 Contracts

Manages employment contracts, NDAs and other agreements — creation, editing, letter generation, and e-signature.

WHERE TO FIND IT Operations → Contracts

- Set a reusable HR signature once, auto-stamped onto every generated contract letter afterward
- All / Active / Expiring Soon / Expired / Drafts / Approval Chain tabs
- Per-contract actions: view details, preview the formatted letter, edit, record a signature via the dedicated e-signing page, move to Documents, or delete

6.4 Documents

A shared, folder-based library for company documents — policies, certificates, contracts, and personal employee files — with sharing, expiry tracking, and e-signature.

WHERE TO FIND IT Operations → Documents

- A folder tree (system folders, one per employee, Shared, Archive, Trash) alongside a searchable, filterable main pane
- Upload with category, destination folder, an optional expiry date, and an acknowledgement requirement
- Per-document actions: view (details, versions, shares, acknowledgements), share (view-only or download access), sign, archive, or delete (soft-deletes to Trash, restorable)

6.5 Reports

A catalogue of every exportable dataset in the system, each with its own dedicated page for filtering and export.

WHERE TO FIND IT Operations → Reports

- Hub page grouped by People / Talent / Operations, with a one-click CSV export per card
- Each dataset's own page offers an Export dialog (CSV, Excel, JSON, Image or PDF), a jump to that dataset's Analytics view, and the full data table
- "Build Custom Report" picks a base dataset and exact columns without opening its own page first

6.6 Analytics

The chart-and-KPI counterpart to Reports — the same datasets shown as dashboards instead of raw tables.

WHERE TO FIND IT Operations → Analytics

- A "Your daily dashboards" row for the four most-checked datasets, plus every other dataset grouped by People / Talent / Operations
- Each dataset's own analytics page: stat tiles and charts (bar, pie, line, radial) built live from current filters, with a "View full report" link back to Reports

GOOD TO KNOW The platform supports a deeper single-topic drill-down layer under a dashboard, but no live dashboard currently uses it.

HR ADMIN

7 Workspace

The internal-communication and culture side of the product — announcements, a company social feed, a help desk, a policy library, peer recognition, project tracking, an idea box, and engagement surveys.

7.1 Announcements

A company bulletin board for policy updates, events and urgent notices, with read-tracking.

WHERE TO FIND IT Workspace → Announcements

- All / Pinned / Archived tabs; summary tiles for Published, Needs Acknowledgement, Upcoming and Drafts
- Create with type, priority, audience (all / department / role), scheduling, an optional expiry, and Pin / Requires Acknowledgement switches
- Per-announcement detail view with Content, Acknowledgements (who's confirmed, by department) and Analytics (views, acknowledgement rate) tabs

7.2 Community

A lightweight internal social feed for updates, shout-outs, events and polls, plus a staff directory and celebrations calendar.

WHERE TO FIND IT Workspace → Community

- Feed: posts by type (Update / Shout-out / Event / Poll / Milestone) that can be liked, commented on, pinned or deleted; poll posts are votable in place
- Celebrations: a filterable grid of birthdays, anniversaries, new hires and promotions with a "Send Congratulations" action
- Directory: a searchable staff grid with a quick-message panel per person

7.3 Helpdesk

The employee support desk where HR queries become trackable cases with SLA deadlines, plus a public FAQ library.

WHERE TO FIND IT Workspace → Helpdesk

- Open Cases / All Cases / FAQ Library / Analytics tabs; overdue cases are flagged and sorted to the top
- New cases get an automatic case number and SLA due date based on priority
- Case detail view: a clickable status tracker, assignment and priority controls, the full thread, and an Internal Note option visible only to HR

7.4 Knowledge Base

The company's policy and how-to article library, with its own publishing workflow — separate from Helpdesk's FAQs.

WHERE TO FIND IT Workspace → Knowledge Base

- Browse (published articles only, Featured pinned) vs. Manage (every article regardless of status)
- New articles support Draft / Published / Archived status, tags, and a "Feature this article" switch
- Analytics: category distribution, publication-status breakdown, helpfulness rate, and a Top 5 Most Viewed list

7.5 Kudos & Recognition

A peer-recognition feed for sending public or private “kudos,” with a monthly leaderboard.

WHERE TO FIND IT Workspace → Kudos & Recognition

- A feed of recognition posts (type, optional company-value tag, reactions, comment threads) alongside a top-3 podium leaderboard
- Send Kudos form: recipient, recognition type, optional custom type and value tag, message, plus Team Broadcast and Private Kudos options

7.6 Projects

Internal project and initiative tracking — timelines, tasks, team allocation, budgets, risks, documents, and go-live readiness.

WHERE TO FIND IT Workspace → Projects

- List page (Active / Closed / All) with a warning banner for anyone over-committed beyond 100% across projects
- Each project has its own detail page with a Project Health strip (Overall / Schedule / Budget / Resources / Critical Path / Scope) and eight tabs: Timeline (Gantt), Tasks, Milestones, Team, Timesheets, Risks & Issues, Documents, and Go-Live Readiness

7.7 Suggestions

An employee idea box with public upvoting, optional anonymity, and an HR review pipeline.

WHERE TO FIND IT Workspace → Suggestions

- Community Board (public, upvotable, non-anonymous) vs. All Submissions (admin-facing, includes anonymous)
- Submit with title, description, category, and an anonymity switch
- HR controls per suggestion: status (Submitted → Under Review → Accepted → In Progress → Implemented, or Declined), priority, featuring, and an Admin Response visible to the submitter

7.8 Surveys

A survey and engagement-pulse builder — one-off surveys, recurring pulse surveys, and a company engagement trend chart.

WHERE TO FIND IT Workspace → Surveys & Engagement

- A single scrollable builder: optional template gallery, title/description, type/status, target audience, dates, pulse frequency (for Pulse type), and a question builder supporting six question types
- Pulse Surveys tab shows recurring surveys as cards with response progress
- Engagement Analytics: a company-wide or per-department engagement score trend over time

8 Admin & Settings

The configuration and governance side of the product — who can sign in and what they can do, a permanent record of every action taken in the system, formal employee-relations case handling, and the company-wide settings that shape every other module.

8.1 Users

Manages individual accounts — who can currently sign in and which roles they hold.

WHERE TO FIND IT Admin → Users

- Total / Active / Locked / Revoked filters
- Assign roles with a live “combined effect” preview when more than one is selected
- Account-state actions — lock, restrict, revoke access, reset password — each require a typed reason, recorded and notified to the employee

GOOD TO KNOW Role definitions themselves (what each role can do) live in Access Levels, not here.

8.2 Access Levels & Permissions

Where roles are actually built — what each role can see and do, and separately, whose records it can see.

WHERE TO FIND IT Admin → Access Levels

- Roles, Assignment History, and My Role Conflicts tabs
- Builder covers a Data Access scope (all records / assigned business units / branches / departments / direct reports / own record only) and a full Permissions Matrix (View, Create, Edit, Approve, Delete, Export per module)
- Duplicate a role (starts as Draft) or Preview the app as if holding it, with a persistent on-screen reminder banner

GOOD TO KNOW Built-in system roles can be cloned or deactivated but not deleted.

8.3 Audit Trail

A read-only, searchable log of every action taken across the system — investigation only, nothing is created or edited here.

WHERE TO FIND IT Admin → Audit Trail

- Filter by action type, module, and HTTP status range; export the visible log
- Full technical detail per entry — endpoint, method, response time, IP/location — with a suspicious-activity flag where relevant

8.4 Grievance & Disciplinary

Formal employee-relations case management — grievances, disciplinary actions, harassment complaints and related types — through a single staged workflow with SLA tracking.

WHERE TO FIND IT Admin → Grievance

- All Cases / Open / Under Investigation / Hearings / Closed tabs
- New Case form: type, priority, employee, confidentiality level, assigned HR officer, description, witnesses and evidence references
- A per-case workflow of stage forms — Assign/Triage, Hearing, Outcome, Appeal, Closure — where only stages relevant to that case type appear, each locked until its prerequisites are recorded

GOOD TO KNOW Case notes carry a visibility setting: HR Only, Case Team, or Employee Visible.

8.5 Settings

Company-wide configuration, organised as five sections: Account, Absence & Attendance, Security, Permissions & Approvals, and Integrations.

WHERE TO FIND IT Admin → Settings

- Account: module enable/disable toggles, dropdown Pick Lists, per-module notification channels, and subscription/billing info
- Absence & Attendance: holiday-year cycles, company holidays, and leave blackout periods
- Security: two-factor enforcement level and method choice, password policy, and trusted-device management
- Integrations: API key generation and scope management (Calendar Subscription is shown but not yet available)

9 Employee Self-Service Portal

A completely different set of screens from the HR Admin portal, scoped to one person's own record: their own leave, their own pay-related documents, their own tasks. Anyone with access to both portals sees a "Switch to Admin Service" button; everyone else only ever sees the screens below.

9.1 Dashboard

The employee's landing page — a single scrolling page of stacked cards giving a snapshot of "your day" and "your record."

WHERE TO FIND IT Overview → Dashboard (default landing page)

- A welcome banner, a day-at-a-glance row (clock status, hours today, pending actions, tasks due), and a profile-stats row (leave, documents, expenses, courses, open tasks, direct reports, tenure)
- Leave Balances, Quick Links, Today's Shift, Pending Items, My Tasks, Announcements, Upcoming Events, Recent Kudos, Team on Leave Today, and Recent Activity cards

9.2 My Tasks

A personal to-do list mixing tasks assigned by HR/your manager with tasks you create yourself.

WHERE TO FIND IT Overview → My Tasks

- Assigned Tasks (view-only completion, priority and category badges, due-date warnings) vs. Personal Tasks (add your own with priority, category and due date)
- Filterable by status and priority, paginated

9.3 My Approvals

The tab showing requests waiting on your decision — relevant only if you're someone else's approver, such as a manager.

WHERE TO FIND IT The "Pending My Approval" tab on My Submissions

- Same detail view as My Submissions, with Approve, Return to sender and Reject actions, plus a signature pad where required

GOOD TO KNOW For most individual-contributor employees this tab is normally empty.

9.4 My Submissions

Every formal request you've filed, routed through the company's central approval-chain engine.

WHERE TO FIND IT Overview → My Submissions

- New Submission form adapts its fields to the request type (leave, expense, asset, training, etc.), with optional attachments and signature
- Detail page: a plain-language status banner, a visual progress bar and timeline, Edit & resubmit (if returned), and Withdraw (if still in progress)

9.5 Company Events

A calendar of company-wide events, training deadlines, birthdays, anniversaries, colleagues' leave, and performance check-ins.

WHERE TO FIND IT Overview → Calendar

- Month calendar plus All Events and Calendar Breakdown tabs, colour-coded by event type

9.6 Expenses (My Expenses)

File and track your own expense claims through to approval and payment.

WHERE TO FIND IT Overview → My Expenses

- New Expense Claim form: category, merchant autocomplete, receipt upload or paste, an "Extract from receipt" auto-fill helper, and a mileage calculator for travel claims
- A natural-language smart search box and a spending-insights card
- Each claim has a detail page with a dot-based progress tracker and the option to edit, withdraw, or delete a draft

9.7 Documents (My Documents)

A personal file-storage area for your own documents, separate from your official HR-held employee file.

WHERE TO FIND IT Overview → My Documents

- A folder sidebar (plus Shared with Me and a 30-day Trash) with a grid/list toggle
- Upload your own files, or Request one from HR (employment verification, salary confirmation, reference letter, tax certificate, pension statement)
- Per-document actions: preview, move to folder, sign, or delete; HR-shared documents can require acknowledgement

9.8 Time Off: Request, Balance, Attendance & Shifts

The most-used part of the portal — everything to do with being away from, or at, work.

WHERE TO FIND IT Overview → Request Leave / My Leave / Time & Attendance / My Shifts

- Request Leave: a Smart Leave Assistant (recommended dates, team coverage count, expiry alerts) alongside the request form (type, half-day or date range, relief employee, required contact details)
- My Leave: entitlement, history, calendar and team-calendar tabs, with the same Smart Assistant panel
- Time & Attendance: a live clock widget (clock in/out, breaks, location), a weekly timesheet with correction requests, a monthly calendar, and usage insights
- My Shifts: a view-only month calendar of your assigned shifts

9.9 My Profile

View your own HR record and request changes to it — every change is routed to HR as an approval request rather than edited directly.

WHERE TO FIND IT Overview → My Profile

- Details / Contact / Address / Bank tabs, plus a Profile Change Request Log tracking every requested change and its outcome
- A left-hand menu of further embedded sections: Timeline, Job, Preferences, Contracts, Emergency Contact, Team & Structure, Leave, Performance, Learning, Compensation, Benefits, Payslips, Assets, and more

9.10 My Contracts

View your employment contracts and sign the ones still awaiting your signature.

WHERE TO FIND IT Reached from My Profile's Contracts section

- Stat-tile filters (Total / Active / Expiring Soon / Unsigned) and a read-only detail view per contract
- Sign directly on screen by drawing a signature on a blank canvas

9.11 My Assets

A read-only list of company equipment currently assigned to you.

WHERE TO FIND IT Reached from My Profile's Assigned Assets section

- Search by name, serial number or type; each asset card shows status, condition, assignment date, and a larger preview image

GOOD TO KNOW Asset assignment itself is managed by HR — there's no request or edit action here.

9.12 Diversity

An entirely optional, self-declared diversity questionnaire, deliberately kept separate from the rest of My Profile.

WHERE TO FIND IT Overview → Diversity & Inclusion

- An assurance card explains upfront that answers are reported only as anonymous totals, never shown individually, and play no part in pay, promotion or performance decisions
- Country-specific categories (for example, a UK tenant asks about Ethnic group, Disability, Religion, Veteran status, and Caring responsibilities); each answer can be cleared individually or withdrawn entirely

9.13 Growth: Performance & Training

Your own performance reviews, goals, and learning progress.

WHERE TO FIND IT My Profile → Performance / Learning sections

- Performance: a review-cycle banner, stat tiles, and four tabs — Overview, My Goals, Reviews, and Self-Assessment (four free-text sections plus a read-only goal-progress reference)
- Training: My Learning (video player with progress tracking and post-course assessments), Course Library (browse/enrol), and Learning History (certificates)

9.14 Company: Announcements, Community, Helpdesk, Knowledge Base & Org Chart

The employee-facing versions of the HR Admin's communication and culture tools, plus the company directory.

WHERE TO FIND IT Company (sidebar group)

- Announcements: unread badge, Active/Archive tabs, pinned items float to the top, Acknowledge action where required
- Community: Community Feed, Kudos (send recognition, react, leaderboard), and Suggestions (submit, upvote, track status)
- HR Help Desk: FAQ & Knowledge plus My Cases, with a New Case form and a reply thread
- Knowledge Base: search, category stat tiles, Most Viewed/Bookmarks tabs, and article voting
- Org Chart: a Directory (searchable staff cards) and Org Chart (visual tree or flat table) — both read-only
